PERMIT GVA0010

Pursuant to:
Greater Vancouver Regional District Air Quality Management Bylaw No. 1082, 2008
and the BC Environmental Management Act, S.B.C 2003, c.53

Issued to:
Chemtrade Electrochem Inc.
(the “Permittee”)

To Authorize:
the discharge of air contaminants to the air from
a Chlor-alkali manufacturing plant

Located at:
100 Amherst Avenue, North Vancouver, BC V7H 1S4

Effective Period:
The terms and conditions set out in the Permit apply to the existing or planned works as of
September 15, 2017 and this permit will expire on January 15, 2026.

All previous versions of this Permit are hereby rescinded and rendered null and void.
SECTION 1 – AUTHORIZED EMISSION SOURCES

Authorization to discharge air contaminants from the authorized Emission Sources and Works listed below is subject to the specified terms and conditions.

Approximate locations of the emission sources are shown on the Site Plan in section 4.

**EMISSION SOURCE 01:** Welding area (maintenance building) discharging through a Vent(s).

- **MAXIMUM EMISSION FLOW RATE:** 90 m³/min
- **MAXIMUM ANNUAL OPERATING HOURS:** 2496 h/y

**MAXIMUM EMISSION QUALITY:**
1. 30 mg/m³ Particulate Matter
2. 10% Opacity.

**WORKS AND PROCEDURES:**
Good operating practices.

**EMISSION SOURCE 03:** Foster Wheeler hydrogen/natural gas fired backup boiler discharging through a Stack(s).

- **MAXIMUM EMISSION FLOW RATE:** 700 m³/min
- **MAXIMUM ANNUAL OPERATING HOURS:** 2208 h/y
- **MAXIMUM PRIMARY BURNER INPUT FIRING RATE:** 125 GJ/h

**MAXIMUM EMISSION QUALITY:**
1. 5% Opacity.

**WORKS AND PROCEDURES:**
Firing of the backup boiler with hydrogen supplemented with natural gas using good combustion practices and operating procedures.

---

Issued: November 14, 1992
Amended: September 15, 2017

Permit GVA0010

Kathy Preston, Ph.D., P.Eng.
Assistant District Director

Page 2 of 21
**EMISSION SOURCE 04**: Chlorine processing disposal and sodium hypochlorite storage tanks discharging through a Vent(s).

**MAXIMUM EMISSION FLOW RATE**: The authorized maximum rate of discharge is that resulting from vapour venting during chlorine system maintenance and/or natural draft from storage tanks

**MAXIMUM ANNUAL OPERATING HOURS**: 8760 h/y

**MAXIMUM EMISSION QUALITY**:  
1. 15 mg/m³ Chlorine

**WORKS AND PROCEDURES**:  
Three tanks, each equipped with an Ershigs 18% (w/v) caustic scrubber, utilized individually, at any given time, as one of the following services:

- sodium hypochlorite storage, OR
- surge tank for vent downs of chlorine system equipment during maintenance, OR
- stand-by tank for sodium hypochlorite storage.

In the event that chlorine is released directly to the atmosphere, in addition to the requirements in Section 2.E of this permit, a written report of each incident including the duration, the cause of the chlorine release, quantity of chlorine released and the remedial action taken, shall be submitted within 5 working days of the incident.

**EMISSION SOURCE 08**: Rail car storage and chlorine processing (dock disposal) discharging through a Vent(s).

**MAXIMUM EMISSION FLOW RATE**: 50 m³/min

**MAXIMUM ANNUAL OPERATING HOURS**: 8760 h/y

**MAXIMUM EMISSION QUALITY**:  
1. 15 mg/m³ Chlorine

**WORKS AND PROCEDURES**:  
Chlorine disposal tanks containing a minimum of 1% (w/v) caustic scrubbing solution and maintained at a pH greater than 12, followed by a secondary packed tower scrubbing system.

In the event that chlorine is released directly to the atmosphere, in addition to the requirements in Section 2.E of this permit, a written report of each incident including the duration, the cause of the chlorine release, quantity of chlorine released and the remedial action taken, shall be submitted within 5 working days of the incident.

Amended: September 15, 2017

Permit GVA0010

Page 3 of 21
EMISSION SOURCE 09: Le Carbone Lorraine hydrochloric acid plant (center plant) discharging through a Stack(s).

MAXIMUM EMISSION FLOW RATE: 5 m³/min
MAXIMUM ANNUAL OPERATING HOURS: 8760 h/y

MAXIMUM EMISSION QUALITY:
1. 15 mg/m³ Chlorine
2. 20 mg/m³ Hydrogen Chloride

WORKS AND PROCEDURES:
Primary packed tower water scrubber, a secondary water spray scrubber operating in series and related appurtenances together with good operating practices.

The Permittee shall continuously monitor and record the scrubber operating parameters for water flow and temperature. The monitoring of these parameters shall be conducted in a manner approved by the District Director. The monitoring records are to be maintained and made available for inspection for a minimum period of three years.

In the event that chlorine is released directly to the atmosphere, in addition to the requirements in Section 2.E of this permit, a written report of each incident including the duration, the cause of the chlorine release, quantity of chlorine released and the remedial action taken, shall be submitted within 5 working days of the incident.

On start-up and during the first hour of operation of the hydrochloric acid plant, the Permittee shall not allow the concentration of chlorine to exceed 22.5 mg/m³ (one hour average).

Stack Information:
Height: 20m
Diameter: 0.15m
Exit Temperature (°C): 50
Flow rate (m³/min): 5

EMISSION SOURCE 10: Le Carbone Lorraine hydrochloric acid plant (east plant) discharging through a Stack(s).

MAXIMUM EMISSION FLOW RATE: 5 m³/min
MAXIMUM ANNUAL OPERATING HOURS: 8760 h/y

MAXIMUM EMISSION QUALITY:
1. 15 mg/m³ Chlorine

Issued: November 14, 1992
Amended: September 15, 2017

Permit GVA0010

Kathy Preston, Ph.D., P.Eng.
Assistant District Director
2. 20 mg/m³ Hydrogen Chloride

WORKS AND PROCEDURES:
Primary packed tower water scrubber, a secondary water spray scrubber operating in series and related appurtenances together with good operating practices.

The Permittee shall continuously monitor and record the scrubber operating parameters for water flow and temperature. The monitoring of these parameters shall be conducted in a manner approved by the District Director. The monitoring records are to be maintained and made available for inspection for a minimum period of three years.

In the event that chlorine is released directly to the atmosphere, in addition to the requirements in Section 2.E of this permit, a written report of each incident including the duration, the cause of the chlorine release, quantity of chlorine released and the remedial action taken, shall be submitted within 5 working days of the incident.

On start-up and during the first hour of operation of the hydrochloric acid plant, the Permittee shall not allow the concentration of chlorine to exceed 22.5 mg/m³ (one hour average).

Stack Information:
Height: 20 m
Diameter: 0.15 m
Exit Temperature (°C): 50
Flow rate (m³/min): 5

EMISSION SOURCE 11A: Centre Acid Plant Surge Tank discharging through a Stack(s).

MAXIMUM EMISSION FLOW RATE: The rate of discharge is that resulting from vapour venting during filling of surge tanks tanker trucks and HCl storage tanks
MAXIMUM ANNUAL OPERATING HOURS: 8760 h/y

MAXIMUM EMISSION QUALITY:
1. 15 mg/m³ Chlorine
2. 20 mg/m³ Hydrogen Chloride

WORKS AND PROCEDURES:
Consisting of the following controls with related appurtenances together with good operating practices:

- Surge tank (EN09) equipped with packed tower water scrubber operating at >99% efficiency.

Issued: November 14, 1992
Amended: September 15, 2017

Permit GVA0010

EMISSION SOURCE 17: Salt handling on stock pile discharging through a Storage Pile(s).

MAXIMUM EMISSION FLOW RATE:
MAXIMUM ANNUAL OPERATING HOURS: 8760 h/y

MAXIMUM EMISSION QUANTITY:
1.  2.7 t/y Particulate Matter

MAXIMUM EMISSION QUALITY:
1.  Particulate: Particulate restriction is based upon a maximum annual salt throughput of 500,000 tonnes/year.

WORKS AND PROCEDURES:
Good operating practices.

Issued: November 14, 1992
Amended: September 15, 2017

Permit GVA0010

Kathy Preston, Ph.D., P.Eng.
Assistant District Director
SECTION 2 – GENERAL REQUIREMENTS AND CONDITIONS

A. AUTHORIZED WORKS, PROCEDURES AND SOURCES
Works and procedures, which this permit authorizes in order to control the discharge of air contaminants, shall be employed during all operating periods of the related sources. The Permittee shall regularly inspect and maintain all such works, procedures and sources.

The District Director must be provided with reasonable notice of any changes to or replacement of authorized works, procedures or sources. Any modification of authorized works, procedures or sources must be approved by the District Director in advance of operation. For certainty, this does not include routine maintenance or repair.

The discharge criteria described in Section 1 of this permit are applicable on the issued or last amended date of this permit unless specified otherwise. If a date different to the issued or last amended date is specified, the existing works, procedures and sources must be maintained in good operating condition and operated in a manner to minimize emissions.

B. NOTIFICATION OF MONITORING NON-COMPLIANCE
The District Director must be notified immediately of any emission monitoring results, whether from a continuous emissions monitor or periodic testing, which exceed the quantity or quality authorized in Section 1 of this permit. Notification shall be made to Metro Vancouver’s 24-hour number: 604-436-6777, or to regulationenforcement@metrovancouver.org.

C. POLLUTION NOT PERMITTED
Notwithstanding any conditions in this permit, no person shall discharge or allow or cause the discharge of any air contaminant so as to cause pollution as defined in the Greater Vancouver Regional District Air Quality Management Bylaw No. 1082, 2008 and the Environmental Management Act.

D. BYPASSES
The discharge of air contaminants that have bypassed authorized control works is prohibited unless advance approval has been obtained and confirmed in writing from the District Director.

E. EMERGENCY PROCEDURES
In the event of an emergency or condition beyond the control of the Permittee that prevents effective operation of the authorized works or procedures or leads to unauthorized discharge, the Permittee shall:

1. Comply with all applicable statutory requirements;
2. Immediately notify the District Director of the emergency or condition and of contingency actions invoked or planned to mitigate adverse impacts and restore compliance; Notification shall be made to Metro Vancouver’s 24-hour number: 604-436-6777; and

Issued: November 14, 1992
Amended: September 15, 2017

Kathy Preston, Ph.D., P.Eng.
Assistant District Director

Permit GVA0010
3. Take appropriate remedial action for the prevention or mitigation of pollution.

The District Director may specify contingency actions to be implemented to protect human health and the environment while authorized works are being restored and/or corrective actions are being taken to prevent unauthorized discharges.

If an emergency situation results in a "spill" as defined in the Environmental Management Act Spill Reporting Regulation, the spill shall also be reported immediately to the Provincial Emergency Program by telephoning 1-800-663-3456.

F. AMENDMENTS
The terms and conditions of this permit may be amended, as authorized by applicable legislation. New works, procedures or sources or alterations to existing works, procedures or sources must receive authorization in advance of operation.

G. STANDARD CONDITIONS AND DEFINITIONS
Unless otherwise specified, the following applies to this permit:

1. Gaseous volumes are corrected to standard conditions of 20 degrees Celsius (°C) and 101.325 kilo Pascals (kPa) with zero percent moisture.

2. Contaminant concentrations from the combustion of specific fuel types are corrected to the following Oxygen content, unless specified otherwise:
   • 3% O₂ for natural gas and fuel oil; or
   • 8% O₂ for wood fuel

3. Where compliance testing is required, each contaminant concentration limit in this permit will be assessed for compliance based on a valid test using test methods approved by the District Director.

4. Visual opacity measurements are made at the point of maximum density, nearest the discharge point and exclude the effect of condensed, uncombined water droplets. Compliance determinations are based on a six-minute average in accordance with the United States Environmental Protection Agency (US EPA) Method 9: Visual Determination of the Opacity of Emissions from Stationary Sources. Continuous Emission Monitor System (CEMS) opacity compliance determinations are based on a one-hour average (taken from the top of each hour).

5. If authorized in Section 1 of this permit, standby fuel use is restricted to a maximum of 350 hours per year and to those periods during which the primary authorized fuel is not available. Fuel oil sulphur content shall not exceed 15 milligrams per kilogram (mg/kg) and emissions during fuel oil firing shall not exceed 10% opacity.

6. Definitions in the Environmental Management Act and Air Quality Management Bylaw apply to terminology used in this permit.

7. Threshold Limit Values (TLV) refer to the Time Weighted Average (TWA) exposure limits for substances specified in the American Conference of Governmental Industrial Hygienists Threshold Limit Values handbook, current on the latest date that this permit issuance or amendment came into effect.

8. Sulphur Oxides (SO₂) are expressed as Sulphur Dioxide.
9. Nitrogen Oxides (NOx) are expressed as Nitrogen Dioxide.
10. The Canadian Council of Ministers of the Environment (CCME) “Environmental Guidelines for Controlling Emissions of Volatile Organic Compounds from Aboveground Storage Tanks (June 1995, CCME-EPC-87E)” shall be adhered to for all applicable tanks unless otherwise stated in this permit.
11. Authorized ‘Maximum Annual Operating Hours’ of 8760 hours per year for an emission source is equivalent to authorization for continuous operation of the emission source for an entire calendar year, including leap years.

H. RECORDS RETENTION
All records and supporting documentation relating to this permit must be kept for at least three years after the date of preparation or receipt thereof, and be made available for inspection within 48 hours of a request by an Officer.

I. HEATING, VENTILATION, AIR CONDITIONING AND INTERNAL COMBUSTION ENGINES
Air contaminants discharged from any natural gas-fired heating, ventilation or air conditioning system for buildings and any internal combustion engine located at the discharge site shall be maintained and operated in a manner prescribed by the manufacturer to ensure good combustion of the fuel with minimum discharge of air contaminants.
SECTION 3 – REPORTING REQUIREMENTS

A. MONITORING REQUIREMENTS AND REPORTING

Unless otherwise approved in writing by the District Director prior to any sampling or analysis, all measurements shall be performed by an independent agency in accordance with Metro Vancouver Air Emissions Sampling Program Manual of Methods and Standard Operating Procedures and the BC Ministry of Environment Field Sampling Manual, as they may be amended from time to time. Any variance from these procedures must receive prior written approval from the District Director.

A minimum of 5 working days advance notice must be given prior to taking measurements required by this Monitoring and Sampling Program. Notification must be given to the Metro Vancouver Environmental Regulation & Enforcement Division (phone 604-436-6777, Fax 604-436-6707, email regulationenforcement@metrovancouver.org).

Unless otherwise specified, sampling shall be performed under operating conditions representative of the previous 90 calendar days of operation. All field data and calculations must be submitted with monitoring results and they shall be reported in the metric units which are used in this permit. These submissions shall include process data relevant to the operation of the source of the emissions and the performance of the emission control works.

The Permittee shall conduct the following monitoring and sampling and submit electronic reports of the results to the District Director by the dates specified below using a password enabled web based application provided by Metro Vancouver.
