

MEET THE UNFLUSHABLES!

Wipes: even if they say flushable, wipes don't break down like toilet paper and form clogs.

Paper towels: thick and absorbent and can lead to clogs.

Hair: stringy and strong – when flushed it can bind things together and create clogs.

Floss: like hair but made of plastic, it ties things together and forms clogs.

Tampons: they expand and absorb liquids and can build up over time to create clogs.

Condoms: they can stretch and bind things together, leading to clogs.

Medication: aren't fully removed in the wastewater treatment process; some end up in our environment. Return old medications to a pharmacy.

WHAT'S OKAY TO FLUSH

Pee, poo and toilet paper are the only safe things meant to be flushed. Anything else wreaks havoc on our sewer system.

WHAT'S SO BAD ABOUT SEWER CLOGS?

Aside from being inconvenient, clogs can lead to:

costly repairs

sewer overflows

chemicals in our environment

damaged equipment
