NHS Profile, 2011 – About the data

The National Household Survey (NHS) Profile provides information collected from the 2011 National Household Survey. The National Household Survey (May 2011) was a voluntary survey in which approximately 4.5 million households received a questionnaire. The survey provides social and economic information, covering such topics as: immigration, citizenship, place of birth, ethnic origin, visible minorities, religion, Aboriginal peoples, labour, education, place of work, commuting to work, mobility and migration, language of work, income, earnings, housing and shelter costs.

Data are provided for selected standard geographic areas including: Canada, provinces and territories, census divisions, census subdivisions, census metropolitan areas and census agglomerations, and federal electoral districts. The data are available according to their release.

The data presented in this profile are from the National Household Survey and the Census of Population. The data are collected for private dwellings occupied by usual residents. A private dwelling is a dwelling in which a person or a group of persons permanently reside. Information for the National Household Survey does not include information for collective dwellings. Collective dwellings are dwellings used for commercial, institutional or communal purposes, such as a hotel, a hospital or a work camp.

To ensure confidentiality, the values, including totals are randomly rounded either up or down to a multiple of 5 or 10. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded.

In addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondents' personal information.

Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. In addition to area suppression, information is suppressed if the global non-response rate to the National Household Survey was greater than 50% or greater than 25% for the Census of Population. Any income data collected from the National Household Survey are suppressed if the population in the area is less than 250 or if the number of private households is less than 40. Suppression of data can also be due to poor data quality or to other technical reasons.

Notes:

* Bowen Island - Data for this area has been suppressed for data quality or confidentiality reasons.

86. Experienced labour force refers to persons who during the week of Sunday May 1 to Saturday May 7 2011 were employed and the unemployed who had last worked for pay or in self-employment in either 2010 or 2011.

88. Refers to the kind of work performed by persons during the week of Sunday May 1 to Saturday May 7 2011 as determined by their kind of work and the description of the main activities in their job. The 2011 National Household Survey occupation data are produced according to the NOC 2011.
